

# Matt Shade Concept

Perfection made simple

## One concept : pinpoint accuracy and reliability.

The R-M brand represents the ultimate in quality and innovation amongst its professional partners in automotive refinishing.

Today, the growing trend for matt finishes is seeing leading car manufacturers offering an increasing variety of satin and matt finishes, from trims and panels to the entire vehicle body.

R-M's innovative response for forward thinking bodyshops is the **Matt Shade Concept** that make easier for spray painters to achieve a professional matt finish.

The mixing process is simpler, the work flows in the bodyshop are accelerated. Possible sources of error are reduced. In the end, reliable results are achieved: the perfect matt finish.

### The two benchmarks in matt clearcoat

**SATINTOP II** and **SILICATOP** matt clearcoats guarantee extremely effective, high performance repair to any matt finish.

With the Matt Shade Concept only two clearcoat are needed: **SILICATOP** and the **SATINTOP II**.

For **SATINTOP II**, the gloss level was raised from 53 to 65 unit, thus eliminating the need for an additional standard clearcoat. Moreover, hardeners and thinners mixed in complex ratios are no longer needed. Only the hardener H 2490 is required, which is precisely tailored for use with the two matt clearcoats.

The addition of a thinner is no longer necessary, which simplifies the mixing process considerably.

### Easy to mix, easy to apply
